                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an antibody immunospecifically binds to padherin or its fragment. The antibody is useful in preparing a composition for treating or preventing a cancer-associated disorder. The present sequence represents a gene upregulated in human colon cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antibody that immunospecifically binds to p-cadherin, useful in preparing a composition for treating or preventing a cancer-associated disorder.

The invention relates to the use of human G-protein coupled receptor 35 (GPR35) for screening therapeutic agents useful in the treatment of cardiovascular disorders, liver and gastrointestinal diseases, cancer disorders, interactly diseases, metabolic diseases, hematological disorders, in a mammal. GPR35 is a G-protein coupled receptor (GPCR). The disorders, in a mammal. GPR35 is a G-protein coupled receptor (GPCR). The cherapeutic agents are screened by contacting a test compound with GPR35 cplypeptide, and detecting the binding of the test compound with GPR35 polypeptide. Also described are: (1) a method of diagnosing the above specified diseases in a mammal, comprising determining the amount of the GPR35 polymucleotide in healthy and/or diseased mammals comprising ctermining the amount of the GPR35 polymucleotide in healthy and/or diseased mammals (c) (2) a pharmaceutical composition for treating the above specified diseases in the mammal. comprising at that binds to the GPR35 polympetide; (3) use of regulators of a GPR35 for the preparation of the pharmaceutical composition, comprising identifying the comparation of the pharmaceutical composition, comprising identifying the comparation of the pharmaceutical carrier. GPR35 is useful for regulator with an acceptable pharmaceutical carrier. GPR35 is useful for compassion diseases, na mammal, and combining the correction testinal diseases, cancer disorders inflammatory diseases, concerning therapeutic agents for treating cardiovascular disorders, liver and gastrointestinal diseases, cancer disorders inflammatory diseases, neurological disorders and urological disorders repiratory diseases. This sequence encodes human GPR35.
                                                                                                                                                                                                              G-protein coupled receptor 35; GPR35; G-protein coupled receptor; GPCR; screening; cardiovascular disease; gastrointestinal disease; liver disease; cancer; neoplasm; metabolic disorder; hematological disease; respirator; respirator; cardiovascular-gen; neurological disease; urological disease; urological disease; arciovascular-gen; respiratory-gen; metabolic; antianemic; respiratory-gen; antiinflammatory; neuroprotective; uropathic; gene; se.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Screening of therapeutic agents useful in treating specified diseases involves contacting test compound with G-protein coupled receptor GPR35, and detect binding of test compound to polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Summer

This sequence is expressed in heematopoletic/immune, gastrointestinal and reproductive tissues. HRAP has cytostatic, immunomodulatory, antitate. HRAP has cytostatic, immunomodulatory, antitatematic, antiatematic, antianemic, antianemic, antidabetic, dereopathic, antianemic, antidabetic, dereopathic, antianemic, and prevention of disorders associated with HRAP expression, especially and prevention of disorders associated with HRAP expression, especially and gastrointestinal disorders (e.g. altherosclerosis, cirrhosis, leukaemia, cancer, AlDS, arthritis, allergies, anaemia, asthma, dermatitis, diabetes, osteoporosis, multiple sclerosis and irritable
                                                                                                                                                                                                                                      cytostatic; immunomodulatory; antiinflammatory; cardiant; antianaemic; antiarticosclerotic; hepacotropic; antiarthritic antirhemmatic; antiarthmatic; cardiantic; osteopathic; antiallergic; antidiabetic; dermatological; neuroprotective; diagnosis; treatment; prevention; reproductive disorder; cardiovascular; call proliferative; autoimmune; inflammatory; allergy; gastrointestinal; atherosclerosis; cirrhosis; leukaemia; cancer; AIDS; arthritis; anaemia; asthma; dermatitis; diabetes; osteoporosis; multiple sclerosis; irritable bowel syndrome; ss.

The sequence of GRR35 is similar to that of a putative purinoceptor PSY9 (34.14 identity) suggesting that ATP or other nucleotide is its ligand. GPR35 mRNA was detected in all adult and focal Lisauses examined with relatively higher clasues, there are 2 major transcripts of 2.4 and 4.4 kb, whereas in skeletal muscle there is a single transcript of 9.4 kb. The method comprises performing a global comparatison of a group of expressed sequence tage (ESTS) known to be expressed in the phenotype/cell type of interest with all ESTS expressed in normal tissue in order to identify ESTS that are preferentially expressed in the phenotype/cell of interest. A method of the invention is useful for determining whether a nucleic acid is a marker for a predetermined phenotype or cell type of interest from a biological species, preferably Arabidopsis or human. The cell type of interest is an abnormal cell such as a tumour cell, and the predetermined phenotype is a stress-induced of the invention is also useful for determining the progression of colon cancer in a human, for detecting tumour cell, and for regulating or preventing the growth of a tumour cell. An antibody of the invention is useful for detecting the absence or presence of peptides encoded by tumour associated markers. A polypebide of the invention is useful as an animal. The present sequence encodes a

                                       The invention relates to pharmaceutical compositions that comprise an agent that inhibits the expression or activity of a tumour-associated antigen (TAG) that is encoded by a nucleic acid. The pharmaceutical compositions and related compositions, are used for treatment of diseases associated with (abnormal) expression of TAG, specifically cancer e.g. of lung, breast, prostate, colon, stomach, pancreas, ear/nose/throat, kidney or cervix, also melanoma. Compositions containing TAG, or related nucleic acid, antibodies or host calls, are also useful for diagnosis and monitoring of tumours. The present sequence represents the human GPR35

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to a novel method of identifying ligands to an orphan receptor protein which comprises transforming calls with DNA encoding a fusion protein of the orphan receptor with a fluorescent protein, so that the fusion protein is expressed in the cells (or cell membranes isolated from them) and contacting the cells with the potential ligand to be tested. A suitable fluorescent protein for incorporation in the fusion protein is green fluorescent protein (GPP), for example GFP-1, wild-type GFP, GFPPU or Bhlanced GFP (EGFP). The method is useful for the identification of ligands binding to an orphan receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cdagacacercagacacgecrererecresecrereceagecarcraecreaced 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to novel, isolated full length human cDNA molecules and the encoded proteins thereof. Specifically, it refers to cDNA clones obtained by an oligo-capping method, where none of these clones are identical to any known human mRNAs. The present invention describes an immunosessy to identify agonists and antagonists, as well as antibodies, antisense molecules and sRNAs that can all be used to bind to and modulate expression of the cDNA molecules. As such, these

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3231
molecules are useful for diagnostic markers or therapeutic targets for the various diseases or morbid states. In particular, they are useful in gene therapy for treating osteoporosis, neurological disease, Alzheimer's disease, Parkinson's disease, dementia, short memory and various cancers, as well as for maintaining equilibrium of sense or motor function, and for treating emotional reaction, fear response and panic. Accordingly, they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, cytostatic and tranquiliser activities. This polymucleotide is a full length human cDNA sequence of the invention. NoTS This sequence is not given in the sequence listing of the specification but can be obtained on CD-ROM from the European Patent Office, Vienna Sub-office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
